

Nano-cal™ [Essential]

(NPN) Certified by Health Canada

NPN is an eight-digit number indicating that the natural health product has been approved by Health Canada and is safe, effective and of high quality. All products with a natural product number are approved for retail sale in Canada.

Nano-cal™ [Essential]

(GMP) Certified by Health Canada

Good Manufacturing Practices (GMP) is a system that ensures products are always produced and controlled to quality standards. It is designed to minimize risks in the production of any pharmaceutical product that cannot be eliminated through final product testing.

Nano-cal™ [Essential]

PREVENT COUNTERFEITING

Nano-Cal™ Over the past 15 years, we have conducted research, development and many years of clinical trials, and successfully used 3D nano-pulverizer technology to produce the world's first-generation basic version of nano-calcium. There are similar packages on the market that are sold under the banner of our company. Customers must be sure to recognize the Canadian certification number to ensure that they purchase authentic products to prevent counterfeiting from harming their health.

IT'S NOT WHAT YOU TAKE,
IT'S WHAT YOU ABSORB!

NANO-CAL™ ENHANCED VERSION

How to take:

Start with a small amount and gradually increase the amount. Take with water or your favorite beverage

To propose:

*Intake by 1-1.5hr before or after foods.

*Do not take with prescription medications

Recommended Dose:

❖ **Children 4 - 8 years:** 1-2 Capsule/day, 1-2 time/ day

❖ **Adolescents 9 - 18 years:** 2 Capsule(s) /day , 2 time /day

❖ **Adults ≥ 19 years:** 2-4Capsule(s) /day, 2 time /day

❖ **Precautions:** Constipation will occur if you take too much. If necessary, take fiber and the constipation will be eliminated.

NANO-CAL™

Nano-Cal™ is
the most cost effective
calcium on the market

Nano-cal™

the body's vital component

During the last 15 years research and development of the World's first 3D Nano-pulveriser technology leading to the successful production of Nano Calcium Essential. Calcium is arguably the most important nutrient in your body and more than 99% of this calcium is stored in bones and teeth.

Calcium is essential for many body functions. It helps regulate the heartbeat, muscle contraction and nerve conduction, as well as building and maintaining a healthy skeleton.

Calcium is essential for many of the body's functions and dietary intake of calcium should provide all the body's daily requirements. However if intake is insufficient over a prolonged period of time this can lead to bone thinning, as calcium is lost from the stores within the bones that an increased risk of fractures and Osteoporosis etc.

Nano-cal™

Good news for curing osteoporosis!

Nano calcium powder is a new type of calcium source with unique characteristics and efficacy, which meets the health care and nutritional needs of today's population.

HIGH-QUALITY RAW MATERIALS

The calcium content reaches more than 39%. The functions described in Donguibojian and Compendium of Materia Medica - inhibit gastric acid secretion, promote blood circulation, prevent hepatitis, cirrhosis, liver cancer, and protect the heart (sedative). Ionized calcium has good water solubility: it does not require gastric acid, is not limited by the amount of gastric acid, and has a solubility of 100%

CURE OSTEOPOROSIS

take it for 1 to 2 years (based on osteoporosis stage III)

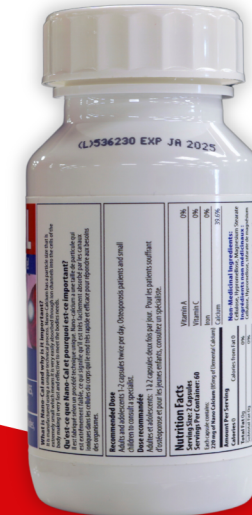

3) ANIMAL EXPERIMENTS

Professor Guo Haesoo's group at Sejong University (Department of Nanofood Engineering) has proved through animal experiments that nanocalcium can cure osteoporosis. Related papers were published in SCI-level international journals (the results of the 3-month test on white mice are equivalent to 1~ 3 years of testing.)

Nano-cal™

Why Nano-cal™ [Essential] is Better?

- You get more for less with our nano particle size calcium. Why buy 4 bottles when you can buy 1. Truth is most people buy one bottle of elemental calcium per month, and unfortunately most people don't get the calcium they need to maintain strong bones.
- Nano particles cover a diverse range of chemical and other entities.
- Nano-Cal Retains the "as-is" ingredients or properties of original substance.
- Able to grind almost all kinds of organic and inorganic substances.
- Very small particle sizes 30nm - 900nm.
- Better efficient and effective function due to the finished spherical shape while the conventional nano-particle shape produced through physical mechanisms is needle shaped.
- Narrow size distribution,
- Guarantee purity and quality.
- High dispersibility.

1 bottle = 4 bottles
